LUMINARIES CAPITAL

Company Profile | 2026

Building better financial futures.

Save with a plan. Stay on track. Pay with purpose.

1. WHO WE ARE

Luminaries Capital is a financial technology company building digital financial solutions that help individuals and communities develop better financial habits, plan for their goals, and prepare for long-term wealth creation.

Beginning in Uganda, we are building a digital-first financial platform around two core areas: structured savings and access to investment opportunities.

We believe financial progress should not be reserved for people with large incomes, specialist knowledge, or access to traditional financial institutions. Everyone should have the tools to plan, build discipline, manage their money with purpose, and work towards a more secure financial future.

Our approach combines accessible digital experiences, goal-oriented financial tools, and a product architecture designed around the realities of the markets we serve.

Our ambition is to help make financial planning more practical, saving more intentional, and investment opportunities more accessible as the appropriate regulatory frameworks and partnerships are established.

2. OUR PURPOSE

Our Vision

To build trusted digital financial infrastructure that enables Africans to save with confidence, access appropriate investment opportunities, and build lasting financial resilience.

Our Mission

To simplify how people save, plan, and prepare for wealth creation through accessible technology, transparent financial products, and tools that turn financial intentions into practical action.

Our Philosophy

Financial progress begins with a plan.

We believe that small, consistent financial decisions can create meaningful long-term outcomes. By helping people establish clear goals, develop disciplined habits, and understand their financial options, we aim to make financial progress more achievable.

3. THE OPPORTUNITY

Across African markets, individuals and households navigate irregular incomes, competing financial priorities, limited access to suitable financial products, and the challenge of maintaining consistent saving habits.

Traditional financial services do not always provide the simple, flexible, and goal-oriented digital experiences people need to manage their everyday financial lives.

At the same time, accessing investment opportunities can require financial knowledge, appropriate intermediaries, and systems that many first-time investors find difficult to navigate.

Luminaries Capital is being built to address these challenges through a structured financial experience that begins with saving and develops towards informed access to investments.

Our starting point is deliberate: help people organise their money, establish financial discipline, and plan for what matters before expanding into a broader range of financial opportunities.

4. OUR SOLUTION

Luminaries Capital is organised around two core product areas:

Luminaries Save

A suite of digital savings experiences designed around different financial needs, habits, goals, and time horizons.

Luminaries Invest

A planned investment offering intended to connect eligible customers with suitable investment opportunities through the appropriate licensed institutions, partners, and regulatory arrangements.

These product areas are distinct but complementary. Savings tools help customers organise and prepare their finances; investment products, when available, can offer additional ways to pursue longer-term financial objectives.

5. LUMINARIES SAVE

Save with a plan. Stay on track. Pay with purpose.

Luminaries Save is our core savings product category. It is designed to make saving easier to understand, more intentional, and better aligned with everyday financial priorities.

Our six-product framework includes:

FLEX — Everyday Savings

Designed for people who want flexibility when setting money aside for everyday needs and short-term financial priorities.

STEADY — Regular Savings

Designed to support consistent saving through daily, weekly, or monthly contributions and a more disciplined approach to building financial reserves.

GOALSAVE™ — Goal-Based Saving

Our flagship savings experience.
GoalSave helps customers turn a financial intention into a practical plan. Customers define what they are saving for, set a target amount and deadline, and use a personalised contribution plan to understand how much they need to save over time.
The experience is designed to support progress tracking, accountability, and the organisation of planned payments. Where supported, customers may identify a beneficiary and record confirmation of a completed payment.
GoalSave is a planning and savings-management tool. It does not, by itself, invest customer savings or guarantee that a financial goal will be achieved.

VAULT — Fixed-Term Savings

Designed for customers who want to set money aside for a chosen period rather than treat every saved amount as immediately available. The applicable term, withdrawal conditions, and other features will depend on the implemented product terms.

DOLLAR SAVE — USD Savings

A planned savings experience for customers seeking to organise savings denominated in US dollars, subject to the availability of the relevant banking, custody, currency, and regulatory arrangements.

CIRCLE — Group Savings

Designed for people who want to save collectively, coordinate shared financial goals, and build accountability within a group. The intended experience includes contribution visibility and shared progress tracking, with group arrangements and payout rules defined by the applicable product terms.
Product availability varies. Dollar Save and any other unlaunched product must remain clearly identified as Coming Soon until operationally available.

6. LUMINARIES INVEST

A considered path towards investment access.

Luminaries Invest is the planned investment division of Luminaries Capital. Its objective is to make appropriate investment opportunities easier to understand and access through a clear digital experience and suitable regulated partners.
The proposed investment framework includes:

- **Treasury** — Access to eligible government treasury instruments, subject to market availability and partner arrangements.
- **USD Income** — Planned access to suitable US-dollar-denominated fixed-income opportunities.
- **Global Markets** — Potential access to eligible international securities through appropriate licensed intermediaries.
- **Funds** — Planned access to suitable regulated collective investment schemes and unit trusts.
- **Real Assets** — A longer-term area of exploration involving eligible real-asset investment opportunities.
- **New Issues** — Potential access to eligible primary-market offerings when available through authorised channels.

The objective is to develop an investment experience that prioritises clarity, suitability, transparency, and informed decision-making.
Investment products involve different levels of risk, liquidity, fees, and potential return. Capital may be at risk, and returns are not guaranteed.
These offerings are planned capabilities, not a representation that every product is currently available. Launches will depend on applicable regulatory permissions, licensed partners, custody arrangements, and operational readiness.

7. OUR CUSTOMER EXPERIENCE

We are building around a simple principle: financial tools should help people take practical action.

- **Understand.** Identify a financial priority and understand the options available.
- **Plan.** Establish a target, timeframe, and realistic contribution plan.
- **Build.** Develop consistent saving habits and monitor progress.
- **Prepare.** Organise finances for upcoming responsibilities and future opportunities.
- **Explore.** When appropriate products and permissions are available, consider suitable investment opportunities with clear information about their risks, costs, and conditions.

Our intention is to create a connected experience without confusing savings balances, goal-planning tools, and investment assets.

8. TECHNOLOGY AND TRUST

Trust is fundamental to our approach.
We aim to build digital experiences that are accessible, understandable, and designed around the needs of the people using them.
Our development priorities include:

- Mobile-first product experiences designed for practical everyday use.
- Clear contribution records, progress indicators, and transaction histories.
- Transparent product terms, applicable fees, withdrawal conditions, and risks.
- Responsible handling of customer information and appropriate security controls.
- Reliable integrations with relevant financial institutions and payment infrastructure.
- Suitable customer verification, monitoring, and operational controls where required.
- Appropriate arrangements for holding, safeguarding, and administering customer funds and investment assets.

Luminaries Capital's role, its partners' responsibilities, and the treatment of customer funds will be clearly communicated for each operational product.
We do not represent a product as licensed, insured, guaranteed, or available unless the relevant status has been established and can be substantiated.

9. OUR MARKET APPROACH

Starting in Uganda. Building for Africa.

Uganda is our initial market and the foundation for developing, testing, and refining our customer experience.
We recognise that African financial markets differ in regulation, payment infrastructure, consumer behaviour, currency conditions, and access to financial institutions.
Our long-term approach is therefore to build on a common technology foundation while adapting products, partnerships, and operations to the requirements of each market.
Expansion will be guided by customer needs, operational readiness, regulatory requirements, and the availability of appropriate financial partners.
Our ambition is not simply to replicate one financial product across multiple countries. It is to develop adaptable digital financial infrastructure that responds to the realities of the communities it serves.

10. OUR PARTNERSHIP APPROACH

Building trusted financial services requires collaboration.
We seek to develop relationships with appropriate financial institutions, licensed investment providers, custodians, technology providers, payment partners, and other organisations that can contribute to responsible product delivery.
Our partnership priorities include:

- Enabling reliable and appropriate financial access.
- Developing transparent and customer-centred product experiences.
- Establishing suitable operational and compliance frameworks.
- Improving financial participation through digital technology.
- Building scalable solutions that respond to local market requirements.

We believe sustainable financial innovation depends on strong execution, responsible partnerships, and trust built over time.

11. OUR ROAD AHEAD

Luminaries Capital is focused on building the foundations of a customer-centred financial platform.
Our immediate priority is to strengthen Luminaries Save, with GoalSave at the centre of the experience. This means refining product usability, improving contribution and progress tracking, and developing a dependable operating model.
Our next priority is to prepare Luminaries Invest for responsible introduction through appropriate regulatory arrangements, licensed providers, and supporting infrastructure.
Over time, we aim to develop a broader digital financial ecosystem that supports people across more stages of their financial lives.
We intend to grow deliberately: proving customer value, establishing trust, and expanding only when the relevant products and supporting systems are ready.

12. CLOSING STATEMENT

A better financial future starts with the decisions we make today.
At Luminaries Capital, we believe that financial progress should be easier to plan for and more accessible to pursue.
Through purposeful savings experiences, practical goal-planning tools, and a carefully developed path towards investment access, we are working to help individuals and communities take greater ownership of their financial futures.
We are beginning in Uganda, with an ambition to build financial technology that can serve the diverse needs of Africa.
